

Introduction

[GDAX](#) is a cryptocurrency exchange where you can trade different crypto currencies. You can see the live data and live trades [here](#).

Challenge:

- Create a react app and use redux to store the data.
- Connect to [GDAX public API](#) and create a dashboard/main page that displays the different products(trading pairs like BTC/USD) and basic information about them.
- When the user clicks on one of the products, it should display the information of that product, like the orderbook, trades...
- There should be a button in each section (dashboard and product) that allow the user to refresh the data.
- You are allowed to choose any library and free to design it the way you desire.
- If you add any other functionality with the data or other design, it will be a plus

Deadline:

Please submit the code before Friday, January 26th 3PM (IST) and feel free to ask any questions regarding the task by sending an email to jose@bitholla.com
