

Dipper Technologies - Front-end Assignment

Build a short S.P.A (Single Page Application) assignment using Itunes search API (<https://affiliate.itunes.apple.com/resources/documentation/itunes-store-web-service-search-api/#lookup>) using React Redux .

User Story -

A user can login using facebook

Without login user can't access dashboard .

User can search for songs artists via itunes api in real-time keypress and user can filter the results by track name , artist name , genre , price etc.

You can host the code in github, surge.sh or wherever you want .

If you have any doubts kindly ask me .

Thanks and Happy Coding
